Summary

Senior Software Engineer with **10 years of experience** building scalable and maintainable **cloud applications**.

Skilled in **Node.js**, **React**, **TypeScript**, and devops/cloud-native tooling.

Experienced in designing **distributed systems** and delivering production-ready solutions end-to-end.

Experience

Founder, May 2025 - December 2025

Offer Inspector Remote

- Designed the full system architecture (frontend, backend, database) and delivered a production-ready MVP.
- Built containerized infrastructure with zero-downtime deployments and automated DB migrations.
- Developed a salary/tax calculation engine for Estonian employment models.
- Created core product features: workspaces, draft offers, comparison flows, visualizations.
- Implemented a scalable PostgreSQL schema and optimized critical queries.
- Set up observability stack (Prometheus, Loki, Tempo, Grafana, exporters).
- Managed full product lifecycle: market research, roadmap, planning, releases.

Senior Software Engineer, 2021 - 2024

Katana cloud inventory Tallinn, Estonia | Remote

- Built and optimized microservices in a distributed system (~100 services) using Kafka and PostgreSQL.
- Delivered cross-team features including API gateway, webhooks, sales orders, and inventory planner.
- Improved manufacturing planning logic, significantly reducing calculation time and errors.
- Led and participated in technical investigations, estimations, and epic planning.
- Enhanced database schemas and queries to improve performance across key services.
- Improved CI/CD pipelines with faster tests and more reliable deployments.

Skills

Programming Languages:

TypeScript   JavaScript   Rust   Go   SQL

Back-end:

Node.js   Express   Nest.js   Microservices   gRPC   REST

Front-end:

React   Redux   CSS3   Next.js   HTML5   Zustand

Databases:

PostgreSQL   MongoDB   Redis   Kafka

Principles:

SOLID   TDD   KISS   DRY   Design Patterns

Experience

Senior Software Engineer, 2020 - 2021

Huawei R&D Lab Saint-Petersburg, Russia | Remote

- Front-End Development: Built the front-end of an IDE for C/C++ developers using Visual Studio Code API, Node.js, Svelte, and TypeScript.
- Remote Debugging & CI/CD: Implemented a remote debugging server, set up CI/CD pipelines for packaging and delivering new versions of the extension, and integrated gRPC protocol for communication.

Full-stack Developer, 2018 - 2020

Diversido Remote

- Developed user-focused front-end features using React, Redux, and TypeScript.
- Built scalable back-end services with Node.js, Express/Nest.js, and PostgreSQL.
- Collaborated with clients and product teams to refine requirements and deliver reliable solutions.
- Implemented CI/CD pipelines and containerized deployments using Docker and AWS.

Full-stack Developer, 2017 - 2018

Ecombix Saint-Petersburg, Russia

- Developed and improved a TypeScript-based integration system using RabbitMQ to connect the platform with Shopify, Magento, and WooCommerce.

Early Career (Junior Roles), 2014 - 2017

BurningButtons, **7Bits and Avelix** Omsk, Russia

- Built front-end and back-end features using JavaScript and Node.js.
- Implemented UI components and business logic under senior supervision.
- Maintained legacy codebases and fixed bugs across multiple small projects.
- Collaborated with senior developers to learn best practices and improve code quality.

Education

Dostoevsky Omsk State University

Degree: Bachelor

2011 - 2015

Field of Study: Applied Mathematics and IT

Skills

Soft:

Scrum Adaptability

Agile Leadership

Critical Thinking

Testing:

Jest Mocha Chai

DevOps:

Kafka Docker AWS

Debezium Kubernetes

Github actions Aptible

Heroku Okteto

Datadog Prometheus

Grafana

Languages

English: Fluent

Russian: Native

Pet Projects

messy-folder-reorganizer-ai

Status: In Production

- AI-powered file organization CLI that helps you tidy up messy folders effortlessly.

NFT Open Marketplace

Status: In Progress

- NFT marketplace based on Ethereum, Solidity, ERC721, Hardhat, Pinata and ethers.js. Custom server for Ethereum node indexing.
